Software Developer Interview – Exercise # 1

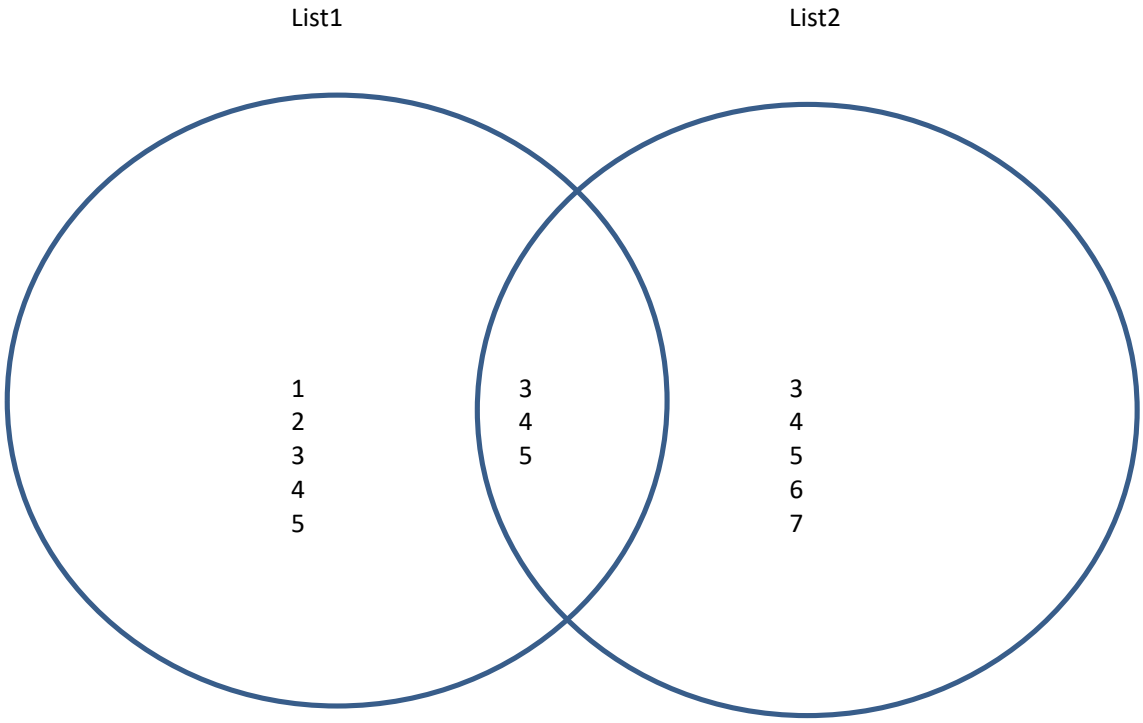
Thanks for applying for a Developer position at EnverSoft!

Please complete the coding exercise described below.

1. You have two lists / integer arrays: List1 and List2
2. List1 is an integer array with elements 1, 2, 3, 4 and 5
3. List2 is an integer array with elements: 3, 4, 5, 6 and 7

Question:

1. Please provide the missing code from the program below. In other words provide the code that will Output the answers to a. b. and c.



a. Common elements in both lists. Answer: 3 4 5
b. Elements in List1 that does not appear in List2. Answer: 1 2
c. Elements in List2 that does not appear in List1. Answer: 6 7

Below is an extract of the code. When you have completed the task, please upload it to the public source repository (GitHub, Bitbucket, Gitlab etc.)

```
using System;

namespace ConsoleApplication1
{
    class Program
    {
        public static void Main(string[] args)
        {
            //You have two arrays/lists as follows
         int[] list1 = new int[] { 1, 2, 3, 4, 5 };
         int[] list2 = new int[] { 3, 4, 5, 6, 7 };

            //a. Show the common elements in both lists.  E.g the common elements are "3 4 5", because they
are contained in both lists.

           Console.WriteLine(string.Join(" ", list3));

            //b. Show the elements from list 1, but is not found in list2.  E.g 1 2"

            Console.WriteLine(string.Join(" ", list4));

            //c. Complete here

            //Show the elements from list 2, but is not found in list1.  E.g 6 7"
          Console.WriteLine(string.Join(" ", list5));

            Console.WriteLine("Press <ENTER> to continue");
          Console.ReadLine();
        }
    }
       }
```
